

ENVIRONMENTAL PRODUCT DECLARATION

In accordance with ISO 14025:2006 and EN 15804:2012+A2:2019 for:

Water supply PE 100 and PE 100 RC pipes*

from

Konti Hidroplast

Programme:

The International EPD[®] System, www.environdec.com

Programme operator:

EPD International AB

EPD registration number:

EPD-IES-0024329

Publication date:

2025-06-16

Valid until:

2030-06-15

**EPD of multiple products, based on the average result of the product group
An EPD should provide current information and may be updated if conditions change. The stated validity is therefore subject to the continued registration and publication at www.environdec.com*

Programme information

Programme:	The International EPD® System
Address:	EPD International AB Box 210 60 SE-100 31 Stockholm Sweden
Website:	www.environdec.com
E-mail:	info@environdec.com

Accountabilities for PCR, LCA and independent, third-party verification
Product Category Rules (PCR)
PCR: CEN standard EN 15804, and construction products PCR 2014:14, v1.3.4
PCR review was conducted by: <i>The Technical Committee of the International EPD® System. A full list of members is available on www.environdec.com. The review panel may be contacted at info@environdec.com.</i>
Life Cycle Assessment (LCA)
LCA accountability: <i>Edis Glogić, LCA consultant</i>
Third-party verification
Independent third-party verification of the declaration and data, according to ISO 14025:2006, via: <input checked="" type="checkbox"/> EPD verification by individual verifier Third-party verifier: <i>Silvia Vilčeková</i> Approved by: The International EPD® System
Procedure for follow-up of data during EPD validity involves third-party verifier: <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No [Procedure for follow-up the validity of the EPD is at minimum required once a year with the aim of confirming whether the information in the EPD remains valid or if the EPD needs to be updated during its validity period. The follow-up can be organized entirely by the EPD owner or together with the original verifier via an agreement between the two parties. In both approaches, the EPD owner is responsible for the procedure being carried out. If a change that requires an update is identified, the EPD shall be re-verified by a verifier]

The EPD owner has the sole ownership, liability, and responsibility for the EPD.

EPDs within the same product category but registered in different EPD programmes may not be comparable. For two EPDs to be comparable, they must be based on the same PCR (including the same version number) or be based on fully-aligned PCRs or versions of PCRs; cover products with identical functions, technical performances and use (e.g. identical declared/functional units); have equivalent system boundaries and descriptions of data; apply equivalent data quality requirements, methods of data collection, and allocation methods; apply identical cut-off rules and impact assessment methods (including the same version of characterisation factors); have equivalent content declarations; and be valid at the time of comparison. For further information about comparability, see ISO 14025.

Company information

Manufacturer	Konti Hidroplast DOOEL
Address	Industriska 5, 1480 Gevgelija , North Macedonia
Contact details:	Gordana Manoleva, +389 70 216 292, gordanam@konti-hidroplast.com.mk, Industriska 5, 1480 Gevgelija, North Macedonia
Website:	www.konti-hidroplast.com.mk

Description of the organisation:

Konti Hidroplast is a leading private enterprise in the Balkans, specializing in the production and distribution of polymer-based products and solutions. Established in 1990, the company began with the manufacturing of polyethylene (PE) water pipes and has since evolved to include polypropylene (PP) and significantly broaden its product portfolio. Today, the company is a recognized expert in piping systems for water supply, gas distribution, sewage, drainage, and other infrastructure applications, serving both utility and industrial sectors. With a strong export orientation, Konti Hidroplast has established a presence across Europe and North Africa, and continues to grow as a trusted partner in international markets.

Product-related or management system-related certifications:

Pipes are manufactured under a recognized Quality and environmental management system standards, such as ISO 9001 (Quality Management System) and ISO 14001 standards (Environmental Management System).

Name and location of production site:

Industriska 5, 1480 Gevgelija, North Macedonia

Product information

Product name:	Water supply PE 100 and PE 100 RC pipes
Product reference:	https://konti-hidroplast.com.mk/wp-content/uploads/2024/10/pe-80-100-en.pdf https://konti-hidroplast.com.mk/wp-content/uploads/2024/10/pe-100-rc-en.pdf
UN CPC code	36320 - Tubes, pipes and hoses, and fittings therefor, of plastics

Product description:

PE 100 and PE 100 RC water pipes are high-density polyethylene (HDPE) pipes designed for potable water supply, irrigation, and industrial water transport. These pipes offer superior strength, flexibility, and resistance to environmental factors, making them a preferred choice for modern piping systems.

Geographical scope:

Modules A1 and A2: Global

Module A3: North Macedonia

Modules A4, A5, C1-C4 & D: Europe

LCA information

Declared unit:

1 kg of pipes

Time representativeness:

Data used for LCA calculation is 2024 (calendar year).

Database(s) and LCA software used:

Modeling is carried out using Ecoinvent database version 3.10.1 and OpenLCA software version 2.4.0.

Description of system boundaries:

The scope of this analysis Cradle-to-gate with options (A4, A5), C1-C4, D. Use stage (B1-B7) is not considered.

Manufacture and packaging (A1-A3)

Pipes are manufactured at a single industrial site in North Macedonia. Pipes are manufactured by extrusion, where they are heated at 200–250°C then pushed through a die head, shaping it into a continuous cylindrical pipes. The die and calibrator determine the pipe's diameter and wall thickness according to required specifications.

Raw material input for the pipes consists of 100% primary HDPE resin, imported from Europe and the Middle East, with an approximate transport distance of 8287 km by sea and 477 km by road. Material losses during manufacture (2%) are recycled in a closed-loop system. Electricity is used as the primary energy source for manufacturing and is supplied from the national grid in North Macedonia (82%) and on-site photovoltaic generation (18%). Water is used for cooling during the process and is reused multiple times before disposal. The wastewater does not contain any significant contamination beyond traces of lubricant and plastic particles. This is the sole emission output from production. Packaging materials, including wooden pallets, PET plastic straps, and strapping steel tape, are used to transport and secure pipes during shipping.

Transport and installation (A4, A5)

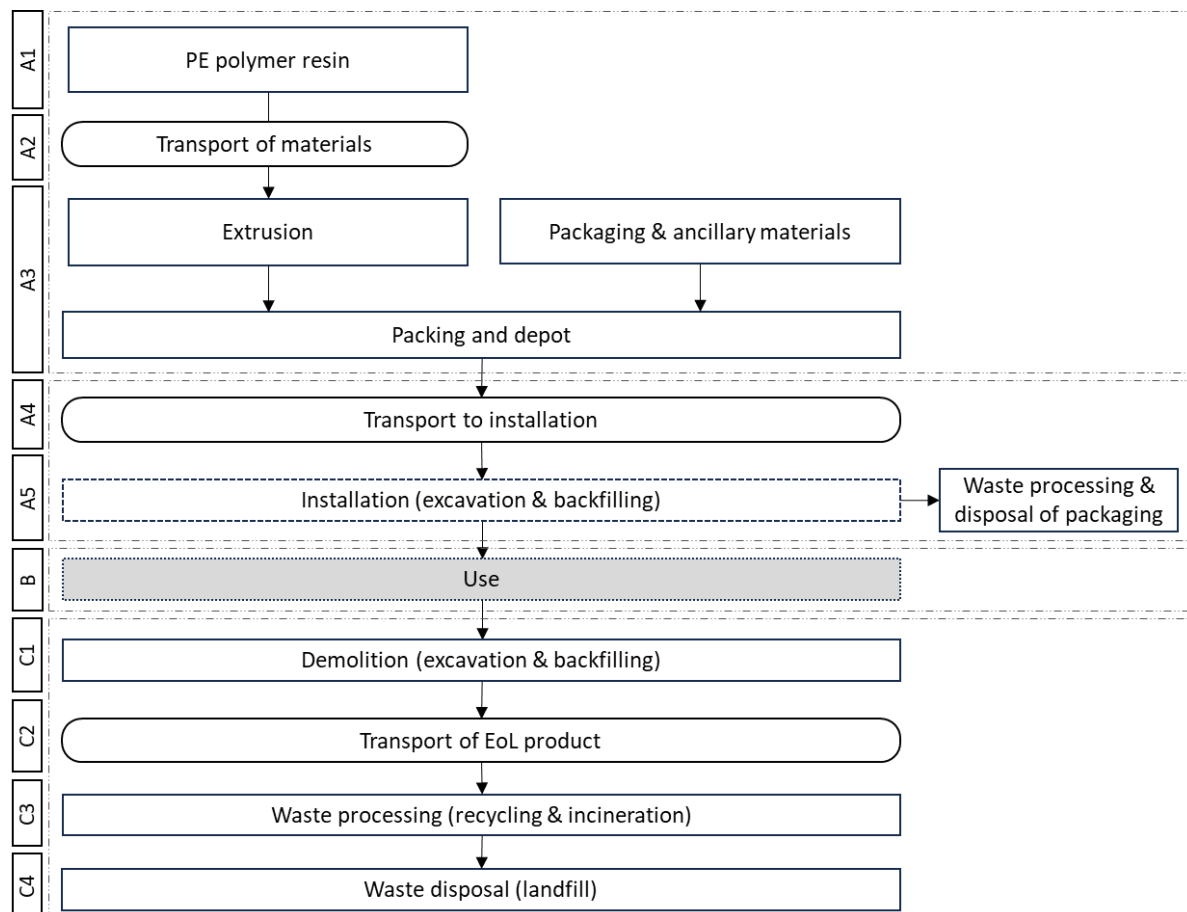

Transportation distance from the manufacturer to the user is based on average sales figures for 2024. Pipes are mostly exported to European Union (EU) countries by truck, covering an average distance of

430 km. Installation of pipes and fittings involves excavation and backfilling. Disposal of transportation materials is considered based on an average EU context. The following recycling, incineration, and landfill ratios were considered: 31%-31%-38% for wood¹, 32.5%-42.5%-25% for plastics² and 85.5%-0%-14.5% for metal³. It is assumed that the incineration of wood and plastic is carried out with energy recovery of which electricity accounts for 11% and heat for 62% (Eriksson & Finnveden, G. 2017).

Product end-of-life (C1-C4 & D)

At the end of life, pipes are excavated from the ground and sent for waste processing and disposal. Waste treatment is based on an average EU context, using the same rates of landfill, recycling, and incineration as previously described for plastic packaging. Transport to waste processing is estimated at 50 km. Environmental benefits and loads from potential product and packaging recycling and incineration are reported in Module D. Loads represent the impacts arising from the recycling process, while benefits result from the avoided production of equivalent virgin or recycled materials.

System diagram:

² EuroParl (2023)

³ Apeal (2020)

Allocation and assumptions

All raw, auxillary and packaging materials and manufacturing energy are allocated from annual average production data. Allocation of packaging materials was carried out based on approximate quantities for specific product transportation, and allocation of energy and water was carried out based on physical parameters (mass and process conditions).

Cut-off criteria

The study includes all the major material and energy consumption, with a minimum 95% of the input and output flows reported, in accordance with EN15804+A2:2019 standard. The cut-off includes the impacts associated with capital goods (equipment, machinery, vehicles, and buildings), fuel and lubricant use for machinery cranes and forklifts, and fuel use for stamping and compacting during installation. Specific data for these were not available, difficult to average across product lines and are likely small.

Additional environmental information

The company strives to minimize the use of energy and water, and improve the recycling efficiency in manufacturing. Energy-saving tips and instructions are in place to reduce consumption during production with high control and scheduling of machine operation using licensed software to measure and optimize energy use.

Konti Hidroplast is committed to circular economy by designing products for long life and recyclability, optimizing production, reuse of waste, and through collaboration with other industries to close material cycles. PE 100 and PE 100 RC pipes are made of highly recyclable polyethylene and given their segregated collection at the end-of-life without crosscontamination with other plastics, they have a good potential to be recycled and reused as raw material for new pipes or other plastic products.
